How to Replace a Head Gasket | YourMechanic Advice

The engine block sealer works by pumping the sealer through the engine's cooling system and accumulating at leaks to create a seal. Step 6: Let the engine run. Idle the engine for 15-20 minutes, or for however long as instructed on the bottle. Running the engine for this period of time will give the sealer time to work and seal properly.

Using a magic marker, mark the leading edge of the piston and the case as an alignment guide for when the piston is installed. Use plenty of clean ATF, or Trans Gel, on the seals. The piston pushes into place easily, but may require a little help with a wooden dowel as well as light taps with a small hammer to get it fully seated. Step 4:
