KIESELMANN leakage butterfly valves are the cost-effective and space-saving solution for safe product separation in process plants. They are used as reliable shut-off devices on panels and containers. In contamination-sensitive areas, you can offer extra security. A leak caused by seal wear can be detected and corrected immediately.

Butterfly Valves isolate or regulate the flow of fluid by using a closing mechanism with a rotating disc. These valves allow for a cost-effective and lightweight solution. Among the valves on offer are Double Block & Bleed, Triple Offset Segment Values that provide absolute shut-off and PTFE Sealed Fire-safe Valves.

The pressure loss through a butterfly valve is small in comparison with the gate valve. The L/D ratio for this type of valve is approximately one-third of that of a gate valve. Butterfly valves are used in large and small sizes. They may be hand wheel-operated or operated using a
