### **Consonant Strength | Phonological Patterns and Phonetic ...**

Phonetic patterns that characterize consonant strength are located. Some phonetic characteristics pattern simply as general indicators of manner of articulation, while others pattern clearly by position (initial or medial, pre-stress or non-pre-stress). The phonetic studies reveal both similarities to phonological weakening and differences.

Phonological Patterns/Processes Language can be divided into several different areas such as semantics, syntax, pragmatics and phonology. Today's post will focus on phonology which is the language system regarding the rules of sound combinations in a language. More specifically, I will discuss phonological patterns/processes that are used by children to simplify adult speech.

## **Top 5 Phonological Patterns in Children treated by SLPs ...**

patterns for the first cycle of intervention include: (a) final consonants, (b) /s/ clusters, (c) velars, and (d) liquids. Potential optimal phoneme targets to enhance the phonological patterns were projected for cycle one (approximately 16 contact hours). In addition, potential secondary target patterns for later cycles were discussed.

Phonology: The Sound Patterns of Language • There are only a dozen or so features needed to describe every speech sound in every human language – All the languages in the world sound so different because the way the languages use speech sounds to form patterns differs from language to language

## **Phonology: The Sound Patterns of Language**

Few acoustic studies of the intervocalic consonant lenition in central Italian dialects (a process known as Gorgia Toscana) have been undertaken. This study examines speech data from Florentine Italian in order to describe the process of Gorgia Toscana quantitatively and to assess the roles of physiological, perceptual, phonological, and social factors in the process.

The /s/ and /r/ consonants are a particular relative strength among AAE learners (vs. GAE learners), even those with SSD. Recall also that /s/ and /z/ were acquired earlier by TD AAE learners even in final position, as was the cluster /-rs/, despite the nonfavored status of final position in that dialect.
