Concrete Silos Hoffmann, Inc. is a nationally recognized leader in the design and construction of reinforced concrete silos. By utilizing both jumpform and slipform techniques in the construction of our concrete silos, we can offer you a variety of options. Jumpform construction can be used with silo diameters ranging from 9 feet to 110 feet.

Marietta Silos is a nationwide leader in design and construction of concrete storage silos. We custom-build a variety of concrete silos, using our design and construction expertise to help you decide what types and sizes will work best for your application. At Marietta Silos we typically design all of our silos with the assistance of a silo engineer, which fulfills an industry requirement.

be given to the design and construction of the silo that it will resist high winds. Fire Proof Construction. It adds materially to the value of any building to be made of fire proof materials. The shape and general requirements of the silo make it especially well adapted to the use of masonry construction which is fire proof.

### Silo construction - Iowa State University

Abstract. In order to structurally design a silo, an engineer must determine all loads that are likely to be applied to it. These include, among others, wind, seismic, external, and loads induced by the stored bulk solid. Numerous codes and standards specify means to calculate the latter (so-called solids-induced loads).
