National eHealth Governance

The Electronic Health Record Sharing System (eHRSS) is a territory-wide and patient-oriented electronic sharing platform. It enables access and sharing of participating patients' health data by authorised healthcare providers in the public and private sectors.

eHealth - Home

The Scottish Government's eHealth programme aims to change the way in which information and related technology are used within NHSScotland in order to improve the quality of patient care. Delivering the eHealth Programme is vital to support the shift from reactive, crisis management, acute-orientated care towards anticipatory, preventative and continuous care.

eHealth Statistics - gov.scot

The original eHealth Strategy 2014 – 2017 set out a national direction through a common vision and set of key aims. The Strategy maintained a focus on healthcare and the needs of NHSScotland, but was redeveloped to recognise rapidly evolving integration of health & social care and the need to address not only NHSScotland requirements, but also the expectations and requirements of partnership organisations and citizens, for electronic information and digital services.

Strategies | eHealth

E-government (short for electronic government) is the use of technological communications devices, such as computers and the Internet to provide public services to citizens and other persons in a country or region. E-government offers new opportunities for more direct and convenient citizen access to government, and for government provision of services directly to citizens.
