Implementation Pressman And Wildavsky

Pressman and Wildavsky discuss why this might have been the case. For one thing, there were so many steps from the time that EDA decided to go to Oakland with many actors having to agree at each stage of the process. Also, there was the authors' concern that money was provided based on plans rather than actual performance in terms of employment.

The Pressman-Wildavsky implementation model consists of a chain of statistically independent nodes or clearance points with an attached probability. Relax the model in five ways and the probability for clearance increases substantially (Alexander, 1989). First, it is unrealistic to assume that actors will make only one attempt at clearance.
