Integrated Pest and Disease Management in Greenhouse Crops ...

Integrated pest management, also known as integrated pest control is a broad-based approach that integrates practices for economic control of pests. IPM aims to suppress pest populations below the economic injury level. The UN's Food and Agriculture Organization defines IPM as "the careful consideration of all available pest control techniques and subsequent integration of appropriate measures that discourage the development of pest populations and keep pesticides and other interventions to leve

Integrated pest management - Wikipedia

For farmers, IPM is the best combination of cultural, biological and chemical measures to manage diseases, insects, weeds and other pests. It takes into account all relevant control tactics and methods that are locally available, evaluating their potential cost-effectiveness. IPM does not, however, consist of any absolute or rigid criteria. It is

Integrated Pest Management - CropLife International

Plant & Food Research develops integrated methods of managing pest and disease that encourage the use of monitoring and minimise the use of chemical controls. Integrated Pest Management (IPM) programmes allow growers to monitor pests and diseases to ensure thresholds are not exceeded. Software provides a means for logging, tracking and analysing pesticide usage, as well as providing information on the best times to apply control agents, optimising inputs and reducing environmental impact.

Pest and disease management | Wine Australia

Potassium nitrate has also proven to be a valuable tool in crop pest and stress management and has shown positive effects on the control of plant pests and diseases when applied or as an additive to crop protection agrochemicals, thus allowing the grower to practice more effective and judicious use of pesticides.

Disease Management

Integrated Pest Management (IPM) is an important garden practice. IPM does not eliminate garden pests but endeavors to keep pests under control and reduce their damage to a tolerable level through a variety of methods. For many years, farmers followed the premise that the only good bug was a dead bug. Hobby gardeners also followed this premise.
