The Best Pokémon: Liquid Crystal Features

Liquid crystals tend to consist of rigid molecules with polar groups, and their anisotropic structures exhibit unusual optical and electrical properties. Many substances exhibit phases that have properties intermediate between those of a crystalline solid and a normal liquid.

11.8: Liquid Crystals - Chemistry LibreTexts

Liquid crystals (LCs) are a state of matter which has properties between those of conventional liquids and those of solid crystals.For instance, a liquid crystal may flow like a liquid, but its molecules may be oriented in a crystal-like way. There are many different types of liquid-crystal phases, which can be distinguished by their different optical properties (such as textures).

Liquid Crystal Concentrate is a 34% active, concentrated blend of surfactants that can be used for the formulation of shampoos, shower gels, bubble baths or liquid hand washes. Liquid Crystal Concentrate is fully formulated, cold process, pre-preserved and ready to go.

Liquid Crystal Concentrate Guide Recipe - Stephenson

Liquid crystal phases are generally cloudy in appearance, which means that they scatter light in much the same way as colloids such as milk. This light scattering is a consequence of fluctuating regions of non-uniformity as small groups of molecules form and disperse. The anisotropy of liquid crystals causes them to exhibit birefringence.
