$f(t,T)=S(t)e^{r(T-t)}$ (6.11) if the stock pays no dividends. The futures prices are random, but this is caused entirely by the randomness of the prices of the underlying asset. If the futures prices depart from the values given by the above formula, it is a reflection of the market's view of future interest rate changes.

Basic Ideas of Financial Mathematics 1 Percentage The word "percent" simply means "out of 100". Thus if you have 55% in a test, it means you obtained 55 marks out of a possible 100. This means you obtained $\frac{55}{100}$ th's of the marks available. So if the test is actually marked out of 40, then you have $\frac{55}{100}$ of $40 = \frac{55}{100} \times 40 = 22$ marks:

Basic Ideas of Financial Mathematics

Course Description: This is an introductory course in Financial Mathematics. You will learn about the different types of interest (simple interest, discount interest, compound interest), annuities, debt retirement methods, investing in stocks and bonds.
