How To Type Faster - 8 Effective Typing Tips | Typing Lounge

In the touch typing system, every finger is assigned to one or two columns of the keyboard. All fingers are placed on their home position in the middle row and only move up or down towards their

respective keys.

Therefore the hands are kept static on one position and it is possible to quickly learn how to type without looking at the keyboard.

Finger position -The ten key home row is considered to be the 4, 5, and 6 keys and a typist should rest their middle finger on the 5 key. Ten key proficiency, like any form of typing, is built on muscle memory. Speed comes from practice and repetition first working on muscle memory and then on finger agility.

Touch Typing Techniques Do and Don'ts - YouTube

Touch typing has nothing to do with a touch screen. Basically, touch typing is the ability to type with all your fingers without the need to look at the letters on the keyboard. You achieve

this not only by memorizing the placement of each letter, number, and sign on the keyboard, but by also memorizing which finger controls which keys.
