### Water Treatment Plant Operation A

This course is designed to train operators in the practical aspects of operating and maintaining water treatment plants with an emphasis on safe practices. The material presented includes an introduction to water treatment plants, the role of the operator, source water, reservoir management, and intake structures.

### Water Treatment Plant Operation, Volume 1

A water treatment plant operator works in water treatment plants. Water is pumped from wells, rivers, streams, and reservoirs to water treatment plants, where it is treated and distributed to customers. A water treatment plant operator runs the equipment, control the processes, and monitor the plants that treat the water.

Certified operators are a critical part of providing an adequate and safe supply of water. Operators are typically responsible for a variety of tasks centered around operating and maintaining a system or plant. They typically work in a selection of capacities: water treatment, distribution, water collection, or wastewater.

### Operators | American Water Works Association

Primary Treatment As sewage enters a plant for treatment, it flows through a screen, which removes large floating objects such as rags and sticks that might clog pipes or damage equipment. After sewage has been screened, it passes into a grit chamber, where cinders, sand, and small stones settle to the bottom.
